planetary radial velocity (RV) signal, allowing easier mass determination. Lastly, their lower luminosity results in a closer-in habitable zone (HZ), with orbital periods typically of one or two weeks adequately sampled by TESS. The James Webb Space Telescope (JWST) is poised to revolutionize the field of exoplanet atmospheres (Bean et al.

15.08.2022 · INTRODUCTION The study of exoplanetary atmospheres, even in its first decades, is characterized by incredible diversity and complexity. Attempts to link the phenomenology of atmospheres to the dominant underlying processes have been correspondingly inventive. While placing individual planets under a microscope is a critical exercise, so too is studying large ...
