Elsevier's Dictionary of Technical Abbreviations S. Bobryakov 2005-03-23 The English-Russian dictionary of technical abbreviations contains nearly 65,000 entries covering various fields and subfields of engineering and technology. Abbreviations are widely used in technical literature and, as a rule, they create difficulties for the reader. Numerous abbreviations are used in technical literature dealing with space, agriculture, electronics, computer science, chemistry, thermodynamics, nuclear engineering, refrigeration, cryogenics, machinery, aviation, business, accounting, optics, radio electronics, and military fields, including abbreviations used on a wide scale by the Navy, Airforce and the Army. In many instances the same abbreviation is used in most different fields of engineering and technology though depicting different notions. There are cases when the same abbreviation may have dozen of meanings, depending on the specific field of engineering. The entries are arranged in alphabetical order. A wide range of literature has been explored for the selection and translation of the abbreviations. The dictionary has been compiled by comparing parallel texts in both languages, and by consultation with experts. This publication will be invaluable to the personnel of designing bureaus and research institutions, and also to translators, scientists, researchers, designers and university personnel dealing with various fields of engineering and technology. approx. 125,000 terms

Elsevier's Dictionary of Police and Criminal Law Roy D. Ingleton 1992 The growing interaction between police forces in the UK and those in France, encouraged by the removal of the restrictions on movement of persons between the EC countries, has provoked both an academic interest in the organisation and work of the police in these two nations and an increased professional involvement in criminal matters (in the widest sense) on either side of the Channel. In this dictionary one can find a definitive record of the terms relating to the organisation and functions of the police, the criminal law and rules of evidence, traffic control, drugs, terrorism, accidents and disasters, slang and jargon in common use, as well as an extensive list of acronyms in English and French. The entries reflect the police and criminal

justice systems in France and in England and Wales, but also occasional references are made for those applying in other English-speaking countries (Scotland, USA) and French-speaking countries (Belgium, Switzerland). Police officers, lawyers, writers of detective novels and professional linguists will find this dictionary to be a reliable source for the translation of the various specialised words and phrases which they encounter in their work.

Elsevier's Dictionary of Psychological Theories J.E. Roewecklein 2006-01-19 In attempting to understand and explain various behaviour, events, and phenomena in their field, psychologists have developed and enunciated an enormous number of "best guesses" or theories concerning the phenomenon in question. Such theories involve speculations and statements that range on a potency continuum from "strong" to "weak". The term theory, itself, has been conceived of in various ways in the psychological literature. In the present dictionary, the strategy of lumping together all the various traditional descriptive labels regarding psychologists "best guesses" under the single descriptive term theory has been adopted. The descriptive labels of principle, law, theory, model, paradigm, effect, hypothesis and doctrine are attached to many of the entries, and all such descriptive labels are subsumed under the umbrella term theory. The title of this dictionary emphasizes the term theory (implying both strong and weak best guesses) and is a way of indication, overall, the contents of this comprehensive dictionary in a parsimonious and felicitous fashion. The dictionary will contain approximately 2,000 terms covering the origination, development, and evolution of various psychological concepts, as well as the historical definition, analysis, and criticisms of psychological concepts. Terms and definitions are in English. *Contains over 2,000 terms covering the origination, development and evolution of various psychological concepts *Covers a wide span of theories, from auditory, cognitive tactile and visual to humor and imagery *An essential resource for psychologists needing a single-source quick reference

Elsevier's Dictionary of Reptiles Murray Wrobel 2004-12-04 This dictionary gives an overview

of the English, German, French and Italian names of reptiles. The basic table contains the scientific names of families, genera, species and some sub-species with their identified names, which are given in the singular for species and sub-species and in the plural for other terms.

Elsevier's Dictionary of Automatic Technics B. Zhelyazova 2005-04-28 This dictionary contains 13,000 terms with more than 4,000 cross-references used in the following fields: automation, technology of management and regulation, computing machine and data processing, computer control, automation of industry, laser technology, theory of information and theory of signals, theory of algorithms and programming, philosophical bases of cybernetics, cybernetics and mathematical methods. Automation pertains to the theory, art, or technique of making a machine, a process or a device more fully automatic. Computers and information processing equipment play a large role in the automation of a process because of the inherent ability of a computer to develop decision that will, in effect, control or govern the process from the information received by the computer concerning the status of the process. Thus automation pertains to both the theory, and techniques of using automatic systems in industrial applications and the processes of investigation, design and conversion to automatic methods. Automatic control, automatic materials handling, automatic testing, automatic packaging, for continuous as well as batch processing, are all considered parts of the overall or completely automatic process. The Dictionary consists of two parts, Basic Table and Indexes. In the first part the English terms are listed alphabetically, numbered consecutively and followed by its German, French and Russian equivalents. English synonyms appear as cross-references to the main entries in their proper alphabetical order. The second part of the Dictionary, the Indexes, contains separate alphabetical indexes of the German, French and Russian terms. The reference number(s) with each term stands for the number of the English term(s) in the basic table. Elsevier's Dictionary of Automatic Technics will be a valuable tool for specialists, scientists, students and everyone who takes interest in the problems of investigation devoted to the design, development, and applications of methods and techniques for rendering a process of group of machines self-actuating, self-moving, or self-controlling.

Reference Sources in Science, Engineering, Medicine, and Agriculture Harold Robert Malinowsky 1994 "Thoughtfully compiled, current, and reasonably priced.... Recommended as a 'one-stop-shopping' source..". -- Library Journal "This work is an essential purchase for libraries with collections in the four designated areas". -- ARBA Both print and nonprint sci-tech information sources can be quickly located, and their uses evaluated, with this new resource -- the only sourcebook to cover all four major branches of science. More than 2,400 entries of complete bibliographic information are accompanied by a brief description of each work. Every source is indexed by author, subject, and title. Special chapters cover how technology is changing the way scientists communicate, and how to build a viable collection in specific disciplines.

Elsevier's Dictionary of Herpetological and Related Terminology D.C. Wareham 2005-01-19 The dictionary is a compilation of clear, concise and informative definitions of the characteristic vocabulary commonly encountered and used by herpetologists when discussing, reading, or writing about reptiles and amphibians. It is intended for all those who have an interest in these animals, from the amateur hobbyist who may find himself faced with what can be a rather intimidating scientific term or technical expression, to the trained zoologist who may sometimes have doubts over the exact meaning of a particular term. It will, it is hoped, not only be a useful source of reference to all who are either actively or passively involved in some aspects of herpetology whether they be keepers, curators, breeders, researchers, teachers or students,

but an interesting read as well.

Elsevier's Dictionary of Medicine and Biology G. Konstantinidis 2005-08-18 Dictionaries are didactic books used as consultation instruments for self-teaching. They are composed by an ordered set of linguistic units which reflects a double structure, the macrostructure which correspond to the word list and the microstructure that refers to the contents of each lemma. The great value of dictionaries nests in the fact that they establish a standard nomenclature and prevent in that way the appearance of new useless synonyms. This dictionary contains a total of about 27.500 main English entries, and over of 130.000 translations that should normally sufficiently cover all fields of life sciences. The basic criteria used to accept a word a part of the dictionary during the development period in order of importance were usage, up-to-dateness, specificity, simplicity and conceptual relationships. The dictionary meets the standards of higher education and covers all main fields of life sciences by setting its primary focus on the vastly developing fields of cell biology, biochemistry, molecular biology, immunology, developmental biology, microbiology, genetics and also the fields of human anatomy, histology, pathology, physiology, zoology and botany. The fields of ecology, paleontology, systematics, evolution, biostatistics, plant physiology, plant anatomy, plant histology, biometry and lab techniques have been sufficiently covered but in a more general manner. The latest Latin international anatomical terminology "Terminologia Anatomica" or "TA" has been fully incorporated and all anatomical entries have been given their international Latin TA synonym. This dictionary will be a valuable and helpful tool for all scientists, teachers, students and generally all those that work within the fields of life sciences.

Using Open Data to Detect Organized Crime Threats Henrik Legind Larsen 2017-04-07 This work provides an innovative look at the use of open data for extracting information to detect and prevent crime, and also explores the link between terrorism and organized crime. In counter-terrorism and other forms of crime prevention, foresight about potential threats is vitally important and this information is increasingly available via electronic data sources such as social media communications. However, the amount and quality of these sources is varied, and researchers and law enforcement need guidance about when and how to extract useful information from them. The emergence of these crime threats, such as communication between organized crime networks and radicalization towards terrorism, is driven by a

combination of political, economic, social, technological, legal and environmental factors. The contributions to this volume represent a major step by researchers to systematically collect, filter, interpret, and use the information available. For the purposes of this book, the only data sources used are publicly available sources which can be accessed legally and ethically. This work will be of interest to researchers in criminology and criminal justice, particularly in police science, organized crime, counter-terrorism and crime science. It will also be of interest to those in related fields such as applications of computer science and data mining, public policy, and business intelligence.

Elsevier's Dictionary of Trees M.M. Grandtner 2005-04-08 This dictionary will present all currently accepted generic, specific, sub-specific and variety names of trees, excluding fossil and more recently extinct taxa, hybrids and cultivars. Only the indigenous trees of a continent, those wild species that were natural elements of the spontaneous forest vegetation before the arrival of Europeans or other colonizers, are included. Each generic entry includes the family to which it is assigned, the synonyms of the Latin name, and the English, French, Spanish, trade and other names. For the English and French names the standard name is listed first, followed by other available names with, in parentheses, the countries where they are used. Where appropriate, names in additional languages are also included. Each infrageneric (species, subspecies, variety) entry includes, in addition, the distribution, height, type of foliage, ecological characteristics and main uses of the tree when available. In this volume only taxa indigenous on the North American continent are included, considered in a geographical, not in a political sense. This means from Alaska and Greenland to Panama, including Caribbean, but excluding Hawaii.

Information Sources in the Social Sciences David Fisher 2018-02-19 The aim of each volume of this series Guides to Information Sources is to reduce the time which needs to be spent on patient searching and to recommend the best starting point and sources most likely to yield the desired information. The criteria for selection provide a way into a subject to those new to the field and assists in identifying major new or possibly unexplored sources to those who already have some acquaintance with it. The series attempts to achieve evaluation through a careful selection of sources and through the comments provided on those sources.
