General Dynamics F-16 Fighting Falcon Manual Steve Davies 2014-02-06 Officially called the Fighting Falcon by the USAF (a name loathed by pilots and ground crews), the F-16 is popularly referred to as the 'Viper'. First introduced into service with the USAF in 1978, the F-16 is a successful all-weather multi-role jet fighter which more than 4,500 have been built and exported to 25 countries worldwide. It remains in service more than 30 years later. The Viper incorporates a number of innovative design features that include a frameless bubble canopy for better visibility, pilot's side-mounted control stick for ease of control when manoeuvring, and reclined 30 degrees to reduce the effect of g-forces on the pilot, and the first use of a relaxed static stability/fly-by-wire flight control system that makes the agile aircraft. At the 'business end' the F-16 has an internal M61 Vulcan cannon and eleven weapon-mounting stations.

Starflight: How the PC and DOS Exploded Computer Gaming Jamie Lendino 2022-03-14 No one saw it coming. At its launch in 1981, IBM's original Personal Computer was an expensive business machine—not a gaming behemoth of the kind you saw from Apple, Atari, Commodore, and Tandy. But by 1990, the PC had trampled all its competitors and become the gaming juggernaut it remains to this day. How did this happen? What did the PC do that the ostensibly superior Commodore Amiga, Atari ST, and Apple IIGS, couldn't? In Starflight: How the PC and DOS Exploded Computer Gaming 1987-1994, author Jamie Lendino tells the full story, starting with the PC's humble CGA and monochrome origins, moving through early ill-fated (if influential) failures such as the PCjr and Tandy 1000, and diving deep into the industry-shattering innovations in processing, graphics, sound, software, and distribution that gave the PC (and the gamers who loved it) unprecedented power and reach. Along the way, Lendino explores more than 110 of the PC's most entertaining and important games, revealing how they paved the way for PC supremacy while also offering players new levels of challenge and fun. From groundbreaking graphic adventures (King's Quest, The Secret of Monkey Island), innovative role-playing games (Ultima, Might and Magic), and sprawling space combat epics (Wing Commander, X-Wing) to titanic strategy titles (Civilization, X-Com), first-person shooters (Stellar 7, Doom), wide-ranging simulations (Stunts, Falcon 3.0), and hard-driving arcade action games (Arkanoid, Raptor), you'll discover even in detail how the PC's games catapulted it into the computer gaming stratosphere. Whether you were there at the time—experiencing first-hand the transition from VGA and single-voice beeps and boops to sweepingly symphonic Roland MT-32 sound, and discovering historic titles upon their release—or you're only now discovering the wonders of the era, Starflight: How the PC and DOS Exploded Computer Gaming 1987-1994 is a fresh, dynamic, and impossible-to-put-it-down look at the years when PC gaming—and computer gaming itself—changed forever.

History of Acquisition in the Department of Defense, Volume 1 Converse 2012-06-12 This volume is a history of the acquisition of major weapon systems by the United States armed forces from 1945 to 1960, the decade and a half that spanned the Truman and Eisenhower administrations following World War II. These instruments of warfare—aircraft, armored vehicles, artillery, guided missiles, naval vessels, and supporting electronic systems—when combined with nuclear warheads gave the postwar American military unprecedented deterrent and striking power.1 They were also enormously expensive. The volume is organized chronologically

individual chapters addressing the roles of OSD, the Army, Navy, and Air Force in two distinct periods. The first, roughly coinciding with President Truman's tenure, covers the years from the end of World War II through the end of the Korean War in 1953. The second spans the two terms of the Eisenhower presidency from 1953 through early 1961. The year 1953 marked a natural breakpoint between the two periods. The Korean War had ended. President Eisenhower and his defense team began implementing the "New Look," a policy and strategy based on nuclear weapons, which they believed would provide security and make it possible to reduce military spending. The New Look's stress on nuclear weapons, along with the deployment of the first operational guided missiles and the rapid advances subsequently made in nuclear and missile technology, profoundly influenced acquisition in the services throughout the 1950s and the remainder of the century. As used in this work, the term "acquisition" encompasses the activities by which the United States obtains weapons and other equipment. In surveying the history of acquisition between 1945 and 1960, this study discusses or refers in passing to many of the hundreds of weapon system programs initiated by the services in that period, but it is not an encyclopedia. Instead, it investigates a few major programs in depth in the belief that such detailed examination best reveals the evolution of acquisition policies, organizations, and processes, and the various forces influencing weapons programs.
