Maritime Security: ISPS Code Implementations, Costs and Relating Financing Conference on Trade and Development 2007  
Security in Ports International Labour Office 2004 This Code of Practice, developed jointly by the International Labour Office and the International Maritime Organization, contains a guidance framework for the formulation and implementation of security strategies and the identification of potential security risks. Aimed at governments, employers and workers, it is intended to promote a common approach to port security amongst Member states. The guidelines deal with a variety of issues including security roles, tasks and measures to deter, detect and respond to unlawful acts against ports serving international traffic and maritime operations, as well as considering security awareness and training. Practical examples of a port security assessment and a port security plan are also included. This code follows, where possible, the practice and principles identified in the IMO's ISPS Code and acts as a valuable, complementary guidance document to it, by extending consideration of port security beyond the area of the port facility into the whole port.

ISPS Code International Maritime Organization 2003 The International Ship and Port Facility Security Code (ISPS Code), adopted in December 2002, seeks to: establish an international framework for co-operation between governments and government agencies, local authorities and shipping and port industries to detect and assess security threats and take preventive measures against security incidents affecting ships or port facilities used in international trade; to establish relevant roles and responsibilities at the national and international level for ensuring maritime safety; and to enable efficient collation and exchange of security-related information. These objectives are to be achieved by the designation of appropriate personnel on each ship, in each port facility and in each shipping company to prepare assessments and effect security plans. This publication includes the ISPS Code, relevant amendments to the SOLAS (International Convention for the Safety of Life at Sea) Convention and other resolutions.

SOLAS Convention, known as the ISPS Code (adopted on the 12th of December 2002, in force since the 1st of July 2004), as well as of the Regulation of the European Parliament and of the Council (adopted on 31st of March 2004, in force since the 20th of May of the same year), towards the protection of the marine environment, constitutes a difficult challenge for those responsible for security. The main concern is the protection of the ship-port interface, and all procedures should be focused on creating a tight barrier to all past, present and future threats. This study offers a level of specialised knowledge on those subjects included in the security area, both regarding detection procedure methodologies for risks related to criminal human participation (identification of clues, signs, actions, behavioural patterns, responses to certain control stimuli, etc.) and from the ship standpoint as an independent, autonomous unit to control her integral safety. Contents are addressed taking into account the three main blocks that play a role in security: the ship, her types, structural design and transits; the port as a filter for the threats intending to reach the ship; and the individuals involved in both, besides the criminal elements causing the crisis. Ricard Mari is a Merchant Marine Captain since 1968. From 1964 to 1975 he worked as a seafarer, and from 1975 to 1987 he was the Safety and Emergency Task Manager in a petrochemical company. He holds a Ph. D. in Marine Science by the UPC (Polytechnic University of Catalonia) and is a lecturer in the Nautical School of the UPC. He has written over thirty technical publications applied to maritime activities on the subject of safety. Since 1997 he has prepared diverse studies in the field of ship and port security, based on a research project funded by the EU ' s Falcone programme.

ISPS Code - 2003 Edition International Maritime Organization 2001 The International Ship and Port Facility Security Code (ISPS Code) represents the culmination of just over a year's intense work by IMO's Maritime Safety Committee and its Maritime Security Working Group since the twenty-second session of the Assembly adopted resolution A.924(22), on the review of measures and procedure of ships, in November 2001. The ISPS Code was adopted by one of the resolutions to prevent acts of terrorism which threaten the security of passengers and crews and the safety resolutions that were adopted on 12 December 2002 by the Conference of Contracting Governments to the International Convention for the Safety of Life at Sea.
