Integrating Marker-passing and Problem-solving James A. Hendler 1988 A recent area of interest in the Artificial Intelligence community has been the application of massively parallel algorithms to enhance the choice mechanism in traditional AI problems. This volume provides a detailed description of how marker-passing -- a parallel, non-deductive, spreading activation algorithm -- is a powerful approach to refining the choice mechanisms in an AI problem-solving system. The author scrutinizes the design of both the algorithm and the system, and then reviews the current literature and research in planning and marker passing. Also included: a comparison of this computer model with some standard cognitive models, and a comparison of this model to the "connectionist" approach.

Principles of Programming Languages Bruce J. MacLennan 1983 The purpose of this book is to teach the skills required to design and implement programming languages. Design is an important topic for all computer science students regardless of whether or not they will ever have to create a programming language. The user who understands the motivation for various language facilities will be able to use them more intelligently. The compiler writer who understands the motivation for these facilities will be able to implement them more reasonably.

Implementation is also an important topic since the language designer must be aware of the costs of the facilities provided. Both topics are important to all computer scientists because all computer scientists use languages and because there is an increasing number of language-like human interfaces (word processors, command languages, etc.) that require these skills in their development. Thus, this book treats the design and implementation of programming languages as fundamental skills that all computer scientists should possess -- Preface.

Radioanalysis in Geochemistry H. A. Das 1989 Radioanalysis is indispensable to the present-day geologist and geochemist, due to its three main applications: activation analysis; radiotracer experiments; and the measurement of natural radioactivity. The aim of this monograph is to summarize that part of the use of radioanalysis which emerges from a confrontation with other analytical methods. After an introductory chapter on the scope of radioanalysis and the aim of the book, Chapter 2 deals with sampling procedures for rocks/minerals, sediments and water. In activation analysis the emphasis is on neutron activation and related prompt methods, with either the nuclear reactor or the neutron generator. The use of the cyclotron and the linear accelerator come into view only when they offer unique or superior results. Distinction is made between the purely instrumental procedures (Chapter 3) and those which imply pre- or post-irradiation separations. Elements are discussed according to the groups of the periodic table. Radiotracer experiments are described, based on mass- and activity-balances. Only those radiotracers which are commonly available are considered.

Bolyanatz 2000 Discusses an infrequently encountered principle of social organization, matrilineal descent, as practiced by the Sursurunga of Papua New Guinea. Consistent with recent processual analyses of Melanesian social orders, Bolyanatz writes that members of Sursurunga matrilineal descent groups do not always behave as members of such groups.

Activation and the Earnings of Reservists David S. Loughran 2006 Reports estimates of the effect of activation on the earnings of reservists and finds that earnings loss attributable to activation is less common than that suggested by survey-based analyses. However, the substantial earnings gains most reservists experience might not be sufficient to compensate reservists for the hardship of activation.

Das Handbuch für Startups Bob Dorf 2014-11-04 Ein Startup ist nicht die Miniaturausgabe eines etablierten Unternehmens, sondern eine temporäre, flexible Organisation auf der Suche nach einem nachhaltigen Geschäftsmodell: Das ist die zentrale Erkenntnis, die dem "Handbuch für Startups" zugrundeliegt. Es verbindet den Lean-Ansatz, Prinzipien des Customer Development sowie Konzepte wie Design Thinking und (Rapid) Prototyping zu einem umfassenden Vorgehensmodell, mit dem sich aus Ideen und Innovationen tragfähige Geschäftsmodelle entwickeln lassen. Lean Startup & Customer Development: Der Lean-Ansatz für Startups basiert, im Unterschied zum klassischen Vorgehen, nicht auf einem starren Businessplan, der drei Jahre lang unverändert umzusetzen ist, sondern auf einem beweglichen Modell, das immer wieder angepasst wird. Sämtliche Bestandteile der Planung – von den Produkteigenschaften über die Zielgruppen bis hin zum Vertriebsmodell – werden als Hypothesen gesehen, die zu validieren bzw. zu falsifizieren sind. Erst nachdem sie im Austausch mit den potenziellen Kunden bestätigt wurden und nachhaltige Verkäufe möglich sind, verlässt das Startup seine Suchphase und widmet sich der Umsetzung und Skalierung seines Geschäftsmodells. Der große Vorteil: Fehlannahmen werden erheblich früher erkannt – nämlich zu einem Zeitpunkt, an dem man noch die Gelegenheit hat, Änderungen vorzunehmen. Damit erhöhen sich die Erfolgsaussichten beträchtlich. Für den Praxiseinsatz: Sämtliche Schritte werden in diesem Buch detailliert beschrieben und können anhand der zahlreichen Checklisten nachvollzogen werden. Damit ist das Handbuch ein wertvoller Begleiter und ein umfassendes Nachschlagewerk für Gründerinnen & Gründer. Von deutschen Experten begleitet: Die deutsche Ausgabe des international erfolgreichen Handbuchs entstand mit fachlicher Unterstützung von Prof. Dr. Nils Högsdal und Entrepreneur Daniel Bartel, die auch ein deutsches Vorwort sowie sieben Fallstudien aus dem deutschsprachigen Raum beisteuern.

Lisa's Path Robert Collins Lisa Herbert wants to bring back the life that people had before the "Savage Rain" closed the hyperspace gates and isolated colony worlds. She uses trade, compassion, and her wits to bring worlds together and resolve their problems. This ebook combines the individual novels and short stories that make up the "Lisa Herbert" series into a single digital compilation. This includes putting the short stories between the first, second, and third novels in the series, and for the first time.

Die Wim-Hof-Methode Wim Hof 2021-04-26 »Mit der Wim-Hof-Methode erwachst du zu deiner inneren Quelle von Kraft und Erfüllung. Du wirst feststellen, dass du dein Schicksal selbst in die Hand nehmen kannst.« Wim Hof Er saß knapp zwei Stunden in einem Eisbad, bestieg den Kilimandscharo lediglich in Shorts und Schuhen und lief bei minus 20 Grad einen Halbmarathon barfuß durch arktische Eisfelder: Wim Hof ist davon überzeugt, dass er kein Ausnahmefall ist – jeder Mensch kann das scheinbar Unmögliche schaffen! Leidenschaftlich und fesselnd schildert Wim Hof seinen Weg zum weltbekannten »Iceman« und legt erstmals umfassend seine revolutionäre Methode dar. Diese basiert auf drei Säulen: die Kraft der Kälte, bewusstes Atmen und Mentaltraining. Die Wim-Hof-Methode wird weltweit an acht Universitäten wissenschaftlich begleitet. Neueste Forschungserkenntnisse und erstaunliche Erfahrungsberichte zeigen, dass sie bereits innerhalb weniger Tage die Gesundheit entscheidend verbessert: Sie stärkt das Immunsystem, steigert die Stressresistenz, verbessert das Schlafverhalten und ermöglicht höhere sportliche und mentale Leistungen. Ob jung oder alt – jeder kann die Wim-Hof-Methode anwenden und Zugang zu ungeahnten Energiequellen erschließen, Selbstheilungskräfte aktivieren und innere Grenzen sprengen.

Metal Dihydrogen and s-Bond Complexes Gregory J. Kubas 2001-08-31 According to R.H. Crabtree, Metal Dihydrogen and sigma-Bond Complexes is described as 'the definitive account of twentieth-century work in the area of sigma complexation'. It covers not only Kubas' discovery of dihydrogen coordination and the study of its structure and general properties but also discusses both the theoretical beliefs and experimental results of bonding and activation of dihydrogen on metal centers and the coordination and activation of C-H, B-H, X-H, and X-Y bonds, giving an overview of 'one of the hottest areas in chemistry'.

Wireless Sensor Networks Holger Karl 2011-05-02 WithgreatpleasurewelcomedtheattendeestoEWSN2004,the1stEuropean Workshop on Wireless Sensor Networks, held in the exciting and lively city of Berlin. Wireless sensor networks are a key technology for new ways of

interaction between computers and the physical environment which surrounds us. Compared to traditional networking technologies, wireless sensor networks are faced with a rather unique mix of challenges: scalability, energy efficiency, self-configuration, constrained computation and memory resources in individual nodes, data-centricity, and interaction with the physical environment, to name but a few. The goal of this workshop is to create a forum for presenting new results in the flourishing field of wireless sensor networks. By bringing together academia and industry we hope to stimulate new opportunities for collaborations. In compiling the scientific program we have been quite selective. Thanks to the efforts of 90 reviewers who delivered 252 reviews for the 76 papers originally submitted from all over the world, a strong selection of the 24 best contributions was made possible. The Technical Program Committee created an outstanding program covering the broad scope of this highly interdisciplinary field: from distributed signal processing through networking and middleware issues to application experience. Running such a workshop requires dedication and much work from many people. We want to thank in particular Petra Hutt, Irene Ostertag and Heike Klemz for their valuable and esteemed help in the local organization of this workshop. We hope that you enjoy this volume, and if you were lucky enough to attend we hope that you enjoyed the discussions with colleagues working in this fascinating area.

*Fundamentals of Programming Languages* Ellis Horowitz 1983 This book is written from the point of view that the best way to study and understand programming languages is to focus on a few essential concepts. The book includes such topics as variables, expressions, statements, typing, scope, procedures, data types, exception handling and concurrency. By understanding what these concepts are and how they are realized in different programming languages, the reader arrives at a level of comprehension far greater than can be achieved by writing programs in various languages. Moreover, knowledge of these concepts provides a framework for understanding future language designs.--

*Radiation Physics of Metals and Its Applications* Lev Ivanovich Ivanov 2004 Special attention is given in the monograph to the effect of the type and concentration of impurity and alloying elements and also phase changes on the mechanism of buildup of radiation defects and damage to metallic materials under irradiation. An important section of the book is concerned with the calculation and experimental evaluation of the activation parameters of individual chemical elements and alloys, and a number of methods of reducing the activation of materials is examined. General problems and directions of the development of reduced-activation radiation-resistant alloys are analysed. The final chapter deals with the main experimental relationships and mechanisms of radiation damage in a number of pure metals and constructional materials for atomic engineering
